Equipment Maintenance

Task Code	Description	Times Performed	Recurring	Based On
1 CLEANCHECK	Clean and Check Copier	0	Y	Last Compliance
2 TONER	Replace Toner Cartridge	0	Y	Last Compliance
3		0		

	Date	Meter3
Last / Starting	4/21/2009	0
Trigger Interval	1M	0
Next Due	5/21/2009	0

- Define equipment types
- Define lifetime limits
- Define maintenance labels such as hours, miles, meter readings, etc.
- Define maintenance tasks
- Define trigger intervals
- Define maintenance instructions
- Process work tickets
- Record log entries
- Issue inventory from stock or purchase order against work tickets

This **ASI Addition** is designed to track all maintenance work as well as lifetime limits for any type of equipment maintained by the company. Equipment types are user definable and can be items like vehicles, copiers, printers, pumps or any number of items. In addition to defining the type of equipment, the user can define the maintenance labels, maintenance tasks and trigger intervals.

Maintenance schedules with corresponding tasks and trigger intervals are assigned to the equipment in order to prompt the user when maintenance work is to be performed. Log entries are recorded to capture the usage of the equipment that ultimately drives when maintenance work is due. Work tickets with instructions are used to help the technicians perform their maintenance tasks, and then their work is recorded in the system as part of work ticket processing. Equipment Maintenance also gives the user the flexibility to issue inventory directly from stock to work tickets, or inventory can be issued directly to work tickets from purchase orders. This solution is ideal for any company needing to maintain equipment or assets (like a vehicle fleet).
